axi marble

Introducing the new axi marble Collection. Our signature creation available in new sizes and new designs for your modern and urban spaces of today. We understand the modern lifestyle aspirations that you desire and that's why we have designed the new axi marble collection in three different variants, the white body, full body and the colorbody version. With the new axi marble collection, every aspect of your design and lifestyle needs can be addressed and customized.

But there is one aspect which makes axi marble stand out from all the other tiles in the market. It comes in larger sizes and with lesser cuts, which gives you ample space to innovate and create. With a wide array of choices available starting from cemento and stone woods to beige and classic, axi marble collection has a design ready for your every space.

axi marble

SUNHEARRT CERAMIK offers the best design options with the latest technological innovation. axi marble collection offers budget friendly option and more tiling possibilities with customize sizes, for any project. Our main aim is to provide larger formats tiles with a variety of thicknesses and finishes, in order to let them be used in any kind of projects & budget.

axi marble is durable which defies nature, resulting in a material which helps to shape great ideas. In order to be trendsetter one must keep innovating and we proudly introduce tiles for great ideas.

+PRODUCT PORTFOLIO 2019

9mm THICKNESS

The ideal thickness for reliable floor coverings even in large sizes, and of course also for wall coverings. They are suitable for indoor as well as large areas with continuous traffic.

6mm THICKNESS

Before it was impossible now it is axi marble renovate your home without demolition with significant savings in time and money, no removals & without dust nor noise.

**COLORBODY**

Color body tiles are created with continuous colored stains from the glaze surface throughout the body of the tile. Synchronizing the color of both the glaze and body lessens the visibility of any impact chips, which may occur. The color remains consistent throughout the tile; however, the surface design does not continue through the tile body.

**WHITEBODY**

White body tiles are the colour of the clay body used when producing glazed tile. If the glaze gets chipped from the white body tile, once the floor is mopped and water penetrates the body, you will be left with a brown spot.

**FULLBODY**

Full-bodied porcelain stoneware, on the other hand, is a product whose surface colour is the same all the way through the body of the tile.

ANTI-SLIP SURFACE

MOVE ON
WITH
EXCLUSIVE
FEATURES

axi marble are adaptive in nature and both beautiful and smart. It is anti-slip, stain-proof, water-repellent, heat-proof and highly hygienic-perfect for all counter tops, tables & various professional spaces.

TILE LAYING TIPS

1. Our technical literature cannot reflect all possible applications or factors involved in the on-site use and installation of our products. As a result, before they are used, the project manager, architect or materials specifier should make sure that these materials and any others used to lay them are suitable for the intended use, being fully responsible for the outcome of their use

2. Before proceeding to lay the tiles, check their shade, calibre and choice.

3. Use a mixture of tiles from different boxes when laying them.

4. The substrate must be free from dust, oil, grease, and the remains of other building materials (cement, lime etc). It should not be damp, and it must be stable, with no cracks. Checks should be made to ensure that it is level.

5. Appropriate adhesive must be used for the type of tile and substrate in question. Always follow the manufacturer's instructions for the adhesive to be used.

6. Use the floating and buttering method, spreading cement-based adhesive on both the substrate and the underside of the tiles. In this way, the whole surface will be covered with the adhesive, avoiding possible voids that might lead to broken tiles. Do not forget to check that the edges and corners of the tiles are covered in adhesive.

7. Do not apply cement-based adhesive when there is a risk of frost or ice, during very hot periods, or on rainy days.

8. To lay the tiles on walls or floors, make sure that a minimum joint of 2 mm is left between the tiles. The resulting joint should be filled with suitable grouting of a colour similar to the tiles. Always

follow the manufacturer's instructions for the grouting material to be used.

9. Use a set of levellers when laying the tiles to avoid uneven or bulging tiles.

10. Never use a rubber mallet to tap the tiles into place. Use a rubber trowel.

11. The tiles should not be laid staggered.

12. When laying floor tiles outdoors, the adhesive and grouting should have the right properties for the place where they will be laid.

13. Do not clean the tiles with detergents or corrosive products. If necessary, there are specific products for removing different types of dirt. Always follow the instructions of the product in question.

14. When handling and laying rectified tiles, tile layers should take care not to damage the corners.

15. Once the tiles have been laid, remove any surplus bonding or grouting material as soon as the waiting time indicated by their manufacturers has elapsed. If this residue has dried, use a commercial acidic cement remover designed for this purpose, following the instructions of use. Use a clean sponge. Do not use a scouring pad or other materials that might scratch the surface of the tiles.

16. Inalco cannot be held liable if these recommendations are not followed or if the tiles are wrongly laid. No claims will be accepted for tiles once they have been laid.

CLEANING AND MAINTENANCE

axi marble has an almost non-porous surface and so it is easy to clean. Even so, a series of guidelines should be followed to remove different everyday stains.

The stains should be cleaned away as soon as they occur, using a cloth moistened with water, to prevent them from drying.

In the case of dry stains, moisten the area with hot water in order to soften the dirt and then remove it with a clean cloth.

Before any type of cleaning product is used on porcelain tiles with a glossy polished finish, test it out on an area that is not very visible to check that the shine or colour are not affected by the product.

CLEANING INSTRUCTIONS BY TYPE OF STAIN	
TYPE OF STAIN	DETERGENT
Fat or grease	Alkaline or Solvent
Oil	Solvent
Ink	Solvent
Coffee	Alkaline or Acidic
Wine	Alkaline or Acidic
Fruit juice	Oxidant
Soft drinks	Oxidant
Food colouring	Oxidant
Rubber	Solvent
Indelible pen	Solvent
Cement residues	Acidic
Nicotine	Solvent or Oxidant
Resin	Solvent
Iodine	Oxidant
Blood	Oxidant
Candle wax	Solvent

TRANSPORT SYSTEM

axi marble is extremely heavy and may have sharp edges. It is therefore necessary to wear protective gloves at all times. We recommended the use of single or double suction cups which help to ensure the integrity of the tile is maintained and the operators' safety is not compromised. Carefully wipe the surface of the tile to remove any dust or moisture, position the suction cups on the face of the tile and make sure that they adhere to the surface properly.

For safe handling of large format slabs on-site we highly recommend the use of a specialist tile handling frame with suction cup for larger formats the full frame with four suction cups is suitable, with smaller formats two double suction cups are sufficient.

FIXING SYSTEM

The growth in popularity of large format tiles, with their increased weight and smoother backs, presents new fixing challenges to the professional tiler. Correct preparation of the subfloor or laying surface is crucial. The laying surface should be rigid, non-flexing and capable of supporting the expected load with minimal or no deflection. A level subfloor is extremely important in order to keep tiles from cracking. Sanding high spots and the use of a levelling compound on low spots is essential. It is also important that your tiles are clean and dry, if necessary wash them with clean water and dry them thoroughly before fixing.

Whatever your specific requirements, whether they be for standard or large format slabs within internal or external applications, selecting the appropriate cement-based, fibre-reinforced or ready-mixed adhesive is vital to ensuring the success of your project.

Once your subfloor is clean and dry, spread the adhesive on the surface to be covered with a 10x10mm square toothed trowel, covering an area 5-10cm more than the size of the tile. Always apply the adhesive in stripes running parallel with the short edge to remove air pockets and bubbles. By using this method, full coverage of the tile with adhesive is ensured.

HAND CUTTING SYSTEM

CUTTING

axi marble require high quality diamond blades for cutting; if hiring cutting equipment please ensure this is provided with the appropriate blades. Always cut and fabricate with wet diamond tools and take appropriate measures to provide efficient ventilation in the work area. Always wear approved eye, boot & hand protection when fabricating porcelain.

LINEAR CUTS

For most cuts we recommend the use of a wet saw machine. These are available for cutting lengths of 100 mm up to 2200 mm. The Raimondi Bolt range of bridge wet saw machines are available in various lengths.

For linear cuts of 1500 - 3000 mm we recommend the use of a cutting guide with cutting carriage. Always use a handling frame with suction cups where necessary. The Raimondi FREE-CUT Cutting System is available for lengths up to 4000 mm.

CUTTING GUIDE WITH CUTTING CARRIAGE

Mark the portion to be removed at the ends of the tile with a pencil. Position the cutting guide with cutting carriage so that the references on the guide coincide with the lines marked on the panel.

Lock the cutting guide with the cutting carriage in place using the suction cups. To guarantee correct scoring, the

pressure and movement of the cutting carriage must be constant along the whole length of the cut. Score one end of the panel by 15cm pushing the cutting carriage towards the edge of the panel. Complete the scoring up to the opposite end of the panel.

Using the cutting guide, move the panel until scoring line protrudes 5-10cm from work surface.

Release the cutting guide from suction cups and move towards the middle of the panel. Start cutting off process by positioning cutting-off pliers in line with the line scored on the panel. Exert progressive pressure until you notice that cutting off process has begun. Go to the opposite end and position cutting-off pliers in line with line scored on the panel. Exert progressive pressure until you notice the cutting off process has begun. To complete the cutting off process, one or more operators must grip the portion to be removed and exert progressive pressure.

Sharp or rough edges should be smoothed and finished with a diamond buffer or sanding pad.

TECHNICAL SPECIFICATION FOR FOR axi marble
